

ResQ Plus

**AI-Powered Emergency Response & Coordination
Platform for Bangladesh**

Beyond SOS. Towards Intelligent Emergency Response.

Imagine this...

A university student is struck in a busy street. People panic. No one knows who to call. The nearest hospital is confused. Family is still asleep miles away

❏ In an emergency, every second matters.

The Current Reality in Bangladesh

Ambulance delays

Response times vary widely across cities and rural areas.

Hospital confusion

No unified intake or bed-availability visibility.

Lack of coordination

Siloed services and manual handoffs cost minutes.

Limited first-aid

Few bystanders know critical stabilisation steps.

Family delays

Relatives are often informed too late to help decisions.

Why This Matters — The Golden Minutes

Survival and outcomes depend on rapid, coordinated action in the first minutes after an incident. Delays in triage, routing and notification raise mortality and morbidity.

The Core Problem

Emergency services exist. Coordination doesn't.

The challenge is not availability — it's smart, real-time connection between people, helpers, and facilities.

Introducing ResQ Plus

ResQ Plus is an AI-driven coordination layer that links citizens, volunteers, hospitals, ambulances and families — intelligently and instantly.

- ❏ ResQ Plus doesn't replace emergency services — it intelligently connects them.

Why ResQ Plus is Different

A concise comparison showing how ResQ Plus transforms fragmented emergency response into a connected, intelligent system.

Traditional Emergency Response

- Fragmented communication
- Manual emergency decisions
- Delayed ambulance coordination
- No volunteer integration
- Limited hospital guidance

ResQ Plus

- AI-assisted coordination
- Smart emergency assessment
- Real-time volunteer activation
- Intelligent hospital recommendation
- Connected emergency ecosystem

🗒 "Emergency services already exist. ResQ Plus makes them work together."

Emergency Ecosystem

Visual: AI engine as the coordination hub connecting people, services and future government systems.

How ResQ Plus Works

A fast, deterministic workflow that turns incidents into orchestrated responses — automatically.

Core MVP Features

Smart SOS

One-tap incident capture with auto-priority tagging.

AI Emergency Assistant

Triages symptoms and recommends next steps.

Live GPS Tracking

Real-time location sharing for responders.

Hospital Recommendation

Match patient to nearest capable facility.

Volunteer Network

Mobilise trained bystanders nearby.

Emergency Contact Notification

Immediate family alerts with status updates.

The Intelligence Behind ResQ Plus

ResQ Plus uses lightweight, explainable AI to accelerate decisions in emergencies: emergency assessment → smart prioritization → decision support → voice guidance → hospital recommendation.

Emergency assessment

Rapid triage using symptom & location data.

Decision support

Actionable next steps for responders and callers.

Smart prioritisation

Dynamic threat scoring to route scarce resources.

Voice guidance

Step-by-step spoken instructions for bystanders.

Hospital recommendation

Match case needs to the best nearby facility in seconds.

Competitive Advantage

Feature / Solution	ResQ Plus	Phone Calls	SOS Apps	Hospital Hotlines	Google Maps
Emergency Coordination	Yes ✓	Limited	Partial	Hospital-only	Navigation only
AI Assistance	Yes ✓	No	Minimal	No	No
Volunteer Network	Yes ✓	No	Some	No	No
Hospital Recommendation	Yes ✓	No	No	Limited	No
Family Notification	Yes ✓	Manual	Optional	Manual	No
Emergency Workflow	End-to-end ✓	Fragmented	Point-solution	Facility-focused	Routing only

ResQ Plus is the only platform combining AI-driven recommendations, live coordination, volunteers and hospital matching — a complete emergency workflow.

Why AI?

AI augments — it does not replace professionals. It helps people act faster, with better information.

Faster assessments

AI summarizes symptoms and location within seconds.

Better situational awareness

Aggregates live data — hospital capacity, traffic, volunteer availability.

Human oversight

Responders and clinicians retain final authority.

"AI assists. Humans decide."

Emergency Journey with ResQ Plus

Every second saved increases the chance of survival.

Target Users

Students

Fast campus response and guardian alerts.

Families

One-tap notifications and step-by-step guidance.

Hospitals

Receive pre-triage data and ETA for critical cases.

Ambulance services

Optimised dispatch and route guidance.

Volunteers

Mobilised for nearby first-response support.

Government agencies (future)

Integration for city-wide emergency coordination.

Business Model

Value proposition

Faster response, coordinated resources, reduced mortality.

Customer segments

Hospitals, municipalities, NGOs, individuals.

Key partners

Hospitals, ambulance providers, telcos, government.

Revenue streams

Subscription (hospitals/municipal), transaction fees, premium consumer features.

Cost structure

Cloud & AI ops, support, partnerships, compliance.

Channels

App stores, hospital integrations, municipal programs.

Simple, diversified monetisation that aligns incentives between public and private partners.

Market Opportunity — Bangladesh

Smartphone growth

Rapid mobile penetration enables scale.

Urbanisation

Higher demand for coordinated emergency services in cities.

Emergency statistics

High incidence rates — faster triage saves lives.

Digital Bangladesh initiative

Policy momentum for smart public services.

Charts are placeholders — granular market data available on request.

Implementation Roadmap

- **Phase 1**
Research, prototype, local partnerships.
- **Phase 2**
Pilot in 1–2 cities; refine AI and workflows.
- **Phase 3**
Expand to multiple cities; onboard hospitals & volunteers.
- **Phase 4**
Nationwide rollout with telco and municipal partners.
- **Phase 5**
Formal government integration and policy adoption.

Expected Impact

Reduced response time

Faster triage and dispatch.

Community volunteer network

Local responders augment formal services.

Lives potentially saved

Timely care when seconds matter.

Smarter emergency decisions

Contextual recommendations on-scene.

Improved hospital coordination

Better patient routing and capacity alignment.

Safer communities

Resilience through shared response.

Every Second Counts.

Without ResQ Plus vs With ResQ Plus

Without ResQ Plus

- Panic and confusion
- Delayed ambulance response
- No coordinated communication
- Families informed too late
- Increased risk of critical delays

With ResQ Plus

- Smart SOS activation
- AI-guided emergency response
- Real-time coordination
- Instant family notification
- Faster access to the right hospital

From confusion to coordination.

ResQ Plus

Beyond SOS. Towards Intelligent Emergency Response.

"ResQ Plus doesn't replace emergency services—it intelligently connects them."
